Inert Anti-Terrorism Training Kit – TSK0055 ITAR Controlled

DSA Detection®

INERT ANTI-TERRORISM TRAINING AID KIT

Accurate: Density, X-Ray and WTMD, Z_{eff}

Technology: Backscatter, Computed Tomography, Single and Multiple X-Ray Generator Systems, mmWave

Approvals: DSA is a DHS/TSA qualified vendor list (QVL) provider for training aids.

Designed specifically for mobility, the Anti-Terrorism Training Aid Kit allows the user a smaller footprint without sacrificing training intent or quality. The TSK0055 was designed around threats that are more easily accessible than others. Every threat in this kit was chosen from historic IED events, instructions which can be found online, threats easily constructed from hardware store parts, or stolen from a construction site. These items are density, Zeff, and X-ray correct to replicate the real threats with which they are associated. Included are all the various types of threats which are prohibited from entering a building and are also found on the Interagency Security Committee Standard (ISC) prohibited items list. Ideal for use in security training as well as conducting penetration testing, this kit is perfect for sheriff departments who run courthouse security checkpoints where mobility and storage are important.
