Trace Quality Control Kit – TSK9552

ITAR Compliant

Technology: Fido, SABRE, MMTD, IONSCAN 400B, IONSCAN 500DT, IONSCAN 600, Itemiser 2, Itemiser 3, Itemiser DX, MobileTrace, QS-B220

Approvals: DSA is a DHS/TSA qualified vendor list (QVL) provider for training aids.

The Trace Quality Control (TQC) Kit, also known to DHS/TSA as Thumbprint Quality Control Kit, allows users to effectively perform Red Team Penetration testing using real explosive materials without the hazards and restrictions of bulk explosives. The 3 unique samples of clay-like material each contain a small amount of real explosive material added (RDX, PETN, and TNT). This small amount of explosive material is easily detectable with today's ETDs but is perfectly safe to ship, carries no handling restrictions, and is even non-flammable. UV fluorescent dye has been added to the RDX and PETN TQC samples. This UV dye allows the trainer to verify that material has been deposited on a surface and to show a trainee or screener the location of the explosive contamination. This UV dye is only visible under UV light from the included flashlight and will not reveal the presence of explosive contamination.

**Items in this kit are serialized for accountability purposes.
DSA Detection maintains a record of each kit sold.**

Trace Quality Control Kit Contents		
Quantity	Part Name	Part Number
1	TQC Puck w/ fluorescent tracer – RDX (Yellow)	TQC0002
1	TQC Puck – TNT (Green)	TQC0005
1	TQC Puck w/ fluorescent tracer – PETN (Purple)	TQC0007
1	LED UV Flashlight	TKC7223
20	Alcohol Pads	SW7507
2	Large, Powder-Free, Nitrile Gloves	CNG2093

SINGLE FOCUS. SINGLE SOURCE.
